CAPITAL MARKETS

SpaceX Is Funding an AI Bet Before the Proof

SpaceX's $75 billion IPO puts AI infrastructure inside a profitable Starlink shell. The capacity looks plausible; the operating proof has not reached the meter.

By DeepStack · August 13, 2026 · Capital Markets · 7 min read on the page · deepstack.ltd/stories/spacex-after-the-ipo-exit-liquidity/

THE DEEPSTACK CALL

Skeptical Ahead of the evidence

SpaceX's AI build is credible. The stock has already paid for 10 gigawatts it has not built.

Conviction Moderate (3/5) · Version 2 · Oct 9, 2026

WHAT TO DO WITH THIS

1. Value the AI arm on deployed gigawatts (0.4 today), not on the roughly 10 GW site plan.
2. Treat Starlink's $4.4 billion of operating income as the collateral, not the upside.
3. Strip related-party and Anthropic-linked revenue out before calling AI demand proven.

WHAT WOULD CHANGE OUR MIND

- Deployed capacity climbs toward the site plan, quarter after quarter.
- AI revenue arrives net of related-party deals and Anthropic keeps paying without the capital cycle doing the work.

THE FULL ARGUMENT

The DeepStack Call is that SpaceX's AI infrastructure is more credible than a pure exit-liquidity story, but the stock has moved ahead of the operating evidence. The single most important reason is the gap between 0.4 gigawatts deployed and roughly 10 gigawatts that SemiAnalysis believes can stand by the end of 2027. A site-backed pipeline is meaningful; it is not cash generation. Starlink's $4.4 billion of operating income gives the company room to build, while the widening AI loss gives shareholders little room for error. We would change our mind if deployed capacity approached the site plan, AI revenue arrived net of related-party arrangements and Anthropic's payments proved durable without the capital cycle doing the work.

CALL HISTORY

Version	Date	Stance	Conviction	Reason	By
v2	Oct 9, 2026	Ahead of the evidence	Moderate (3/5)	Side named by the owner.	Marco Cauduro
v1	Aug 13, 2026	Ahead of the evidence	Moderate (3/5)	First call, as published with the story. The conviction, the actions and the flips were set down for the site on October 7, 2026.	DeepStack

BY THE NUMBERS

$75B
IPO proceeds
Raised June 12 at near $1.75T valuation

54%
Peak-to-low drawdown
$225.64 to $104.83 by early August

0.4 GW
Compute deployed
Kakashii's first-quarter reading, August 2026

$1.25B
Monthly Anthropic contract
Through May 2029, as documented by Kevin Gee

WHO IS ON EACH SIDE

SpaceX after the IPO: exit liquidity, or the next ten-bagger?

Each voice is attributed and paraphrased, dated where the date is known, with a link where one exists. DeepStack shows no score, ranking or accuracy for any person. The page: `deepstack.ltd/sides/spacex-after-the-ipo-exit-liquidity/`

4 VOICES

Exit liquidity

Kris Jun 8, 2026

Retail buyers of the SpaceX IPO are the exit liquidity: the fancy name for paying insiders, VCs and early investors at peak hype valuations.

`www.potentialmultibaggers.com/p/when-good-news-is-bad-news`

Kris Jun 8, 2026

The Google SpaceX GPU rental is bullish for Nvidia because there are still not enough GPUs to quench demand; Nvidia ramps production continuously but cannot follow demand.

`www.potentialmultibaggers.com/p/when-good-news-is-bad-news`

Kakashii Aug 6, 2026

SpaceX deployed 0.4 gigawatts of nameplate compute in the last quarter while Musk promises more than 10 gigawatts by end-2027 and describes close to 15 gigawatts at the PowerPoint level.

`kakashiii111.substack.com/p/spacex-ai-revenue-cip-nvidia-gpus`

Kakashii Aug 6, 2026

SpaceX's AI segment reveals the industry's bad accounting habits: how AI revenue is counted, what is hidden in construction-in-progress, and where the Nvidia GPUs everyone calls short-supplied actually are.

THE STRONGEST CASE AGAINST THIS SIDE

Trey Henninger Jun 8, 2026

SpaceX at roughly 100 times trailing revenue would never qualify as a value investment, yet it is feasibly a ten-bagger: an extreme bull scenario could carry the company toward an 18 trillion dollar valuation or beyond over ten to twenty-five years.

2 VOICES

The number is real

Jeremie Eliahou Ontiveros Aug 7, 2026

Selling frontier-model inference is extraordinarily profitable: on a GB300 cluster, OpenAI and Anthropic can generate over 100 billion dollars per gigawatt-year of revenue against roughly 12 billion of rental cost.

newsletter.semianalysis.com/p/spacex-10gw-in-2027-why-its-real

Jeremie Eliahou Ontiveros Aug 7, 2026

SpaceX is on track to build about 10 gigawatts of datacenter capacity by year-end 2027; independent site-by-site evaluation supports the guided 6 to 8 incremental gigawatts, implying a path to 300 billion dollars of ARR with only half the...

THE STRONGEST CASE AGAINST THIS SIDE

Michael Burry Jul 9, 2026

NVIDIA's revenue growth is only mostly real because circular financing sustains marginal AI compute demand above market-rate levels, and resolution of the power bottleneck will reduce revenue recurrence and compress the scarcity premium in margins...

Voices that cross sides

Trey Henninger Jun 8, 2026

SpaceX at roughly 100 times trailing revenue would never qualify as a value investment, yet it is feasibly a ten-bagger: an extreme bull scenario could carry the company toward an 18 trillion dollar valuation or beyond over ten to twenty-five years.

diyinvestingstocks.substack.com/p/spacex-ipo-hedge-against-agi

JunkBondInvestor

Lenders back Starlink's cash and bet the AI spend never drains the company.

Kevin Gee

Long AI in the long run, doubtful the market absorbs three $1T cash-burning IPOs at once.

NOT A DISAGREEMENT

Bridge to Part 1

Burry versus SemiAnalysis: circular financing, or eight times cost at market rates. One premise is wrong, and $300B of projected revenue sits on the difference.

WHERE THEY CROSS

The specific points where one voice meets another: the same evidence read two ways, or the same mechanism with a different sign.

THE DATED TESTS

What would settle it, on the Docket. A test is specified when an outsider can settle it without asking anyone: the question, the source, the rule and what happens if the source is late, revised or silent.

Jan 1, 2027 `p02-t01` PENDING

Quarterly deployed gigawatts will test the roughly 10 GW site plan against 0.4 GW operating now.

Specification pending

May 2029 `p02-t02` PENDING

Anthropic's $1.25B monthly commitment expires; payment durability will test contracted AI demand.

Specification pending

Next bond tranche `p02-t03` PENDING

Bond pricing will show whether lenders still trust Starlink to carry AI spending.

Specification pending

OpenAI IPO window `p02-t04` PENDING

A third trillion-dollar cash-burning listing would test Kevin Gee's market-capacity concern.

Specification pending

THE TEST CAME IN

No test from this Part has resolved yet. Results are promoted by a person and listed on the Results page.

How DeepStack settles a question

Every Part of The Buildout asks one question and gathers the strongest case on each side from named investors and analysts, attributed, dated and linked. DeepStack then takes a side in The DeepStack Call, names what it would take to change its mind, and sets dated tests that an outsider can read on the day. When a test comes in, the result is published with its evidence, confirmed, refuted or inconclusive, and the Call's history records when the house changed its mind and why. No person is scored or ranked. No accuracy rate is shown until ten results exist.

Quoted passages are short, attributed by name and linked to their source; the paraphrases are DeepStack's. Quote this memo with attribution and a link to the canonical page.
