DEEPSTACK The Buildout · Part 11 · Memo

MARKETS

The Backlog Is Not the Quarter

Ciena carries a $10 billion order book, Microsoft's far backlog grew three times as fast as its near one, and Nvidia now waits a year to be paid. The orders will ship. DeepStack expects the profit to arrive later, and the third-quarter reports to show the gap.

By DeepStack · October 8, 2026 · Markets · 11 min read on the page · deepstack.ltd/stories/the-backlog-is-not-the-quarter/

THE DEEPSTACK CALL

Split Revenue yes, margin not yet

The orders will ship. The profit comes later, and a margin that lags the ramp will be reported as a demand miss.

Conviction Moderate (3/5) · Version 2 · Oct 9, 2026

WHAT TO DO WITH THIS

1. Split every backlog into what is due within a year and what is not; a far book outgrowing the near one three to one is mostly forecast.
2. Credit prepaid or bring-your-own-hardware orders as revenue and the rest as options; read a residual-value guarantee as the lender's doubt.
3. Hold gross margin against the stated target before crediting the ramp: Perma-Pipe's 30% in December is the line to clear.

WHAT WOULD CHANGE OUR MIND

- Microsoft's within-a-year backlog grows as fast as the beyond-a-year book on October 28.
- Nvidia's days sales outstanding give back the 14 days Eisman counted, or its terms for investment-grade customers return to 90 days.
- Perma-Pipe converts $57 million or more at a gross margin above 30% while Lumentum and Coherent report their ramps at target margin.

THE FULL ARGUMENT

DeepStack's view is that the orders are real and the near book will ship. Prepaid and supply-constrained demand converts into revenue at the pace of capacity, and nothing in these reports suggests capacity will sit idle in the third quarter. The single most important reason for caution is that profit arrives later than revenue. Between the order and the margin sit ramps absorbing fixed costs ahead of volume, payment terms stretched to a year, revenue deferred until a deployment is complete, a far book outgrowing the near one three to one, and assets whose life the buyers' own lenders now cover with guarantees. DeepStack expects the third-quarter reports to confirm the shipments and to show margin lagging the ramp; the margin reading is the house's, drawn from the suppliers' own targets and from Burry's case on asset life against Tae Kim's and Slok's. The view changes if Microsoft's within-a-year backlog grows as fast as the beyond-a-year book, if Nvidia's days sales outstanding give back the 14 days Eisman counted or its terms for investment-grade customers return to 90 days, or if Perma-Pipe, Lumentum and Coherent report their ramps at target margin. The first answer arrives October 28.

CALL HISTORY

Version	Date	Stance	Conviction	Reason	By
v2	Oct 9, 2026	Revenue yes, margin not yet	Moderate (3/5)	Side named by the owner.	Marco Cauduro
v1	Oct 8, 2026	Revenue yes, margin not yet	Moderate (3/5)	First call, with the story.	DeepStack

BY THE NUMBERS

$10B
Ciena's backlog floor at the end of fiscal 2026
Ciena management, as reported by Gaetano, Sep 17, 2026; supply secured through fiscal 2029

113%
Growth in Microsoft's backlog due beyond one year
Microsoft filing, as read by Michael Burry, Sep 24 to 26, 2026; the book due within a year grew 37%

1 year
Nvidia's terms for its best-rated customers
From 90 days; Steve Eisman with Ed Zitron, Sep 9, 2026

$28B
Meta's residual-value guarantee on its data-center venture
Meta filing, as read by Michael Burry, Sep 24, 2026; $10.8 billion moved to restricted cash

WHO IS ON EACH SIDE

THE DATED TESTS

What would settle it, on the Docket. A test is specified when an outsider can settle it without asking anyone: the question, the source, the rule and what happens if the source is late, revised or silent.

Oct 28, 2026 `p11-t01` PENDING

Microsoft reports: the share of backlog due within twelve months, 30% last quarter, and whether the near book's growth closes on the far book's 113%; at Alphabet, whether the TPU contracts inside cloud backlog get a size; at Meta, which reports October 21, whether the $10.8 billion of restricted cash stays restricted.

Question	Did Microsoft's quarterly report for the quarter ended September 30, 2026 put the share of its remaining performance obligations expected to be recognized as revenue within the next twelve months at 30% or less?
Source	Microsoft Form 10-Q for the quarter ended September 30, 2026, revenue note on remaining performance obligations (SEC EDGAR, CIK 0000789019) `www.sec.gov/cgi-bin/browse-edgar?action=getcompany&CIK=0000789019&type=10-Q`
Rule	Read the sentence in the 10-Q's revenue note that gives the percentage of revenue allocated to remaining performance obligations Microsoft expects to recognize over the next twelve months. The answer is yes if the share is 30% or less (the book keeps drifting outward); no if it is above 30% (the near book is catching up). The growth of the near and far portions against last year's 37% and 113% is DeepStack's reading into the Result, not the answer.
If the source is late, revised or silent	If the 10-Q is not public on EDGAR by November 15, 2026, or states no twelve-month percentage, the test is inconclusive, and the Result says what was read and what was missing.

Nov 18, 2026 p11-t02 PENDING

Nvidia reports: days sales outstanding after the move to a year of payment terms, whether five customers still carry 70% of receivables, and whether guidance near 70% moves toward the unconstrained figure as supply arrives.

Question	In NVIDIA's Form 10-Q for its fiscal quarter ended October 25, 2026, is accounts receivable, net at quarter end, divided by the quarter's revenue and multiplied by 91, at or above 51.1 days?
Source	SEC EDGAR, NVIDIA Form 10-Q for the quarter ended October 25, 2026 (balance sheet and statement of income), CIK 0001045810 www.sec.gov/cgi-bin/browse-edgar?action=getcompany&CIK=0001045810&type=10-Q
Rule	DeepStack computes days sales outstanding from two figures the 10-Q prints: accounts receivable, net on the condensed consolidated balance sheet at October 25, 2026, and revenue on the condensed consolidated statement of income for the three months then ended, times the 91 days of the quarter, rounded to one decimal. The answer is yes if the figure is 51.1 days or more; no if it is below 51.1. The line is the average of the four quarters before the quarter ended July 26, 2026, computed the same way: 54.1 (July 27, 2025), 53.3 (October 26, 2025), 51.4 (January 25, 2026) and 45.4 (April 26, 2026); the quarter ended July 26, 2026 gave 59.6. The payment terms the filing describes are read alongside and do not decide the test.
If the source is late, revised or silent	If the 10-Q is not public on EDGAR by December 15, 2026, the test is inconclusive, and the Result says what was read and what was missing; the next reading is December 31, 2026. If the period the 10-Q covers is not 91 days, the rule uses the number of days its period dates give. Figures are read as first filed; a later amendment does not reopen the test.

Dec 14, 2026 p11-t03 PENDING

Oracle reports: whether new remaining performance obligations keep arriving prepaid or with the customer's own hardware, the condition for a capex peak in fiscal 2027 and 2028.

Specification pending

December 2026 p11-t04 PENDING

Perma-Pipe's third quarter: 40% to 50% of the $142.3 million backlog converting, $57 million to $71 million, with gross margin moving toward 30% and no second receivable write-off.

Specification pending

The optics ramp p11-t05 PENDING

Ciena's $10 billion backlog into shipments, Lumentum's path to $11.1 billion of fiscal 2028 revenue and Coherent's statement that it sells everything it can make, each measured against the margin the company targets.

Specification pending

How DeepStack settles a question

Every Part of The Buildout asks one question and gathers the strongest case on each side from named investors and analysts, attributed, dated and linked. DeepStack then takes a side in The DeepStack Call, names what it would take to change its mind, and sets dated tests that an outsider can read on the day. When a test comes in, the result is published with its evidence, confirmed, refuted or inconclusive, and the Call's history records when the house changed its mind and why. No person is scored or ranked. No accuracy rate is shown until ten results exist.

Quoted passages are short, attributed by name and linked to their source; the paraphrases are DeepStack's. Quote this memo with attribution and a link to the canonical page.

This memo reflects the page as of October 20, 2026. Canonical page: https://deepstack.ltd/stories/the-backlog-is-not-the-quarter/. Who is on each side: https://deepstack.ltd/sides/the-backlog-is-not-the-quarter/.

Analysis and opinion, not investment advice.
