DEEPSTACK The Buildout · Part 14 · Memo

MARKETS

The Cash Arrives Unevenly

Microsoft, Alphabet, Amazon and Meta spent 96 cents on property and equipment for each dollar of operating cash in the second quarter of 2026, up from 65 cents across 2025, by DeepStack's reading of SEC filings. Microsoft still pays from its own cash. Amazon spent $1.38 per dollar in the first half.

By DeepStack · October 14, 2026 · Markets · 10 min read on the page · deepstack.ltd/stories/the-cash-arrives-unevenly/

THE DEEPSTACK CALL

Split Only Microsoft pays with room to spare

Microsoft pays for its build from its own cash. Alphabet and Meta spend most of theirs; Amazon spends more than its operations bring in.

Conviction Moderate (3/5) · Version 2 · Oct 14, 2026

WHAT TO DO WITH THIS

1. Divide capital spending by operating cash, company by company: in the first half of 2026 Microsoft spent 65.3%, Amazon 137.8%.
2. Hold free cash flow to one ruler: Meta's own measure gave $784 million for the June quarter of 2026; cash less purchases, $1.7 billion.
3. Read the financing section beside the spending line: Alphabet sold $49.6 billion of stock in June 2026, and Meta borrowed $24.9 billion.

WHAT WOULD CHANGE OUR MIND

- Alphabet spends under 80 cents of each operating dollar in the September quarter: its cash is catching up with its build.
- Microsoft's purchases pass 85% of its operating cash in the September quarter: even the strongest cloud stops paying its way.
- The four's purchases top their operating cash for the September quarter or for 2026: the group stops paying, toward the debt side.

THE FULL ARGUMENT

DeepStack's view is that only Microsoft pays for its build with room to spare. In the first half of 2026 it spent 65.3 cents of each operating dollar on property and equipment and kept $35.4 billion. Meta spent 76.6 cents and borrowed $24.9 billion in the second quarter; Alphabet spent 95.0 cents and sold $49.6 billion of stock in June; Amazon spent $1.38 for each dollar its operations brought in. As a group the four still pay, narrowly: the guidance points to more spending in the second half, and the cash runs stronger after June. The single most important reason for caution is the calendar: the September quarter brings in more cash than the June quarter, so one quarter can understate the strain. The view changes if Alphabet spends under 80 cents of each operating dollar in the September quarter, or if Microsoft spends more than 85 cents. The first answer arrives on October 28.

THE DATED TESTS

What would settle it, on the Docket. A test is specified when an outsider can settle it without asking anyone: the question, the source, the rule and what happens if the source is late, revised or silent.

Oct 28, 2026 p14-t01 PENDING

Alphabet's September quarter: whether capital spending takes 80 cents or more of each dollar of operating cash, after 49.5 cents a year earlier and 95.0 cents in the first half of 2026.

Question	Did Alphabet's purchases of property and equipment for the quarter ended September 30, 2026 equal 80% or more of its net cash provided by operating activities for the same quarter?
Source	SEC EDGAR, Alphabet filings (the earnings release on Form 8-K and the Form 10-Q for the quarter), CIK 0001652044 `www.sec.gov/cgi-bin/browse-edgar?action=getcompany&CIK=0001652044`
Rule	Take the three-month figures from the statement of cash flows in Alphabet's earnings release; if the release gives only year-to-date figures, use the nine-month figure less the six-month figure from the Form 10-Q. Divide purchases of property and equipment by net cash provided by operating activities. The answer is yes if the ratio is 80.0% or more; no if it is below 80.0%. Alphabet's own free cash flow line, finance leases and its spending guidance for the year are read alongside and do not decide the test.
If the source is late, revised or silent	Alphabet has scheduled the release for October 28, 2026. If neither the release nor a Form 10-Q states the quarter's cash flow figures on EDGAR by November 9, 2026, the test is inconclusive, and the Result says what was read and what was missing; the next reading is November 16, 2026. Figures are read as first filed; a later amendment does not reopen the test.

Nov 10, 2026 p14-t02 PENDING

The four's September-quarter reports on EDGAR: whether combined purchases of property and equipment topped combined operating cash, after 96.1% in the June quarter of 2026.

Question	Did the combined purchases of property and equipment of Microsoft, Alphabet, Amazon and Meta for the quarter ended September 30, 2026 exceed their combined net cash provided by operating activities for the same quarter?
Source	SEC EDGAR, the Forms 10-Q of Microsoft, Alphabet, Amazon and Meta for the quarter (statements of cash flows; XBRL company facts) `www.sec.gov/edgar/search/`
Rule	Read each company's statement of cash flows for the quarter; where a Form 10-Q gives only year-to-date figures, the quarter is the later cumulative figure less the earlier one from the same fiscal year (for Microsoft, the first quarter of its fiscal 2027). For Amazon, purchases are the gross line, before proceeds from sales and incentives. Sum the four purchases and the four operating figures. The answer is yes if combined purchases exceed combined net cash provided by operating activities; no if they are equal or lower. Each company's own ratio and free cash flow measure are read alongside and do not decide the test.
If the source is late, revised or silent	If any of the four Forms 10-Q is not on EDGAR by November 9, 2026, the filing deadline for large companies, the test is inconclusive on November 10, and the Result says what was read and what was missing; the next reading is November 16, 2026. Figures are read as first filed; a restated earlier quarter in the same filings is named in the Result and does not change the reading.

Feb 12, 2027 p14-t03 PENDING

The 2027 budgets of Alphabet, Amazon and Meta: whether the midpoints sum to at least 25% more than the three spent in 2026.

Question	Do the midpoints of the 2027 capital expenditure guidance that Alphabet, Amazon and Meta give with their fourth-quarter 2026 results sum to at least 25% more than the three companies' 2026 capital expenditures?
Source	Investor-relations pages of Alphabet (abc.xyz/investor), Amazon (ir.aboutamazon.com) and Meta (investor.atmeta.com): fourth-quarter 2026 earnings releases and call transcripts `abc.xyz/investor/`
Rule	Each company's 2026 capital expenditures and its 2027 guidance are read as that company defines capital expenditures in the release or on the call that gives the guidance (for Meta, including principal payments on finance leases). A range counts at its midpoint; a single figure counts as given; a floor stated as at least or more than a figure counts at that figure. The answer is yes if the three 2027 figures sum to 1.25 times the three 2026 figures or more; no if the sum is below that. Microsoft gives no calendar-year figure and is not part of the test.
If the source is late, revised or silent	If any of the three gives no 2027 figure by February 12, 2027, the test is inconclusive, and the Result says what was read and what was missing; the next reading is that company's first-quarter 2027 results, by May 15, 2027. Guidance revised after the first statement does not reopen the test.

Feb 16, 2027 p14-t04 PENDING

The full year: whether the four's purchases topped their operating cash across calendar 2026, after 91.4% in the first half.

Question	Did the combined purchases of property and equipment of Microsoft, Alphabet, Amazon and Meta for the four calendar quarters of 2026 exceed their combined net cash provided by operating activities for the same quarters?
Source	SEC EDGAR, the 2026 annual reports (Form 10-K) of Alphabet, Amazon and Meta and Microsoft's Forms 10-K and 10-Q covering January to December 2026 (statements of cash flows; XBRL company facts) `www.sec.gov/edgar/search/`
Rule	Sum, for each company, January 1 to December 31, 2026: Alphabet, Amazon and Meta from their annual statements of cash flows; Microsoft from the four quarters of its fiscal 2026 and 2027 that fall in the calendar year, each the later cumulative figure less the earlier one. For Amazon, purchases are the gross line, before proceeds from sales and incentives. The answer is yes if combined purchases exceed combined net cash provided by operating activities; no if they are equal or lower. Each company's own free cash flow measure is read alongside and does not decide the test.
If the source is late, revised or silent	If any of the filings is not on EDGAR on February 16, 2027, the reading waits; if one is still missing on March 1, 2027, the annual-report deadline for large companies, the test is inconclusive, and the Result says what was read and what was missing; the next reading is March 15, 2027. Figures are read as first filed; a restated quarter is named in the Result and does not change the reading.

THE TEST CAME IN

How DeepStack settles a question

Every Part of The Buildout asks one question and gathers the strongest case on each side from named investors and analysts, attributed, dated and linked. DeepStack then takes a side in The DeepStack Call, names what it would take to change its mind, and sets dated tests that an outsider can read on the day. When a test comes in, the result is published with its evidence, confirmed, refuted or inconclusive, and the Call's history records when the house changed its mind and why. No person is scored or ranked. No accuracy rate is shown until ten results exist.

Quoted passages are short, attributed by name and linked to their source; the paraphrases are DeepStack's. Quote this memo with attribution and a link to the canonical page.

This memo reflects the page as of October 19, 2026. Canonical page: https://deepstack.ltd/stories/the-cash-arrives-unevenly/. Who is on each side: https://deepstack.ltd/sides/the-cash-arrives-unevenly/.

Analysis and opinion, not investment advice.
