DEEPSTACK The Buildout · Part 06 · Memo

POWER

Power Doesn't Depreciate. Its Premium Moves.

Electricity is the constraint, but the premium belongs to whoever can secure permission, build on time and turn a megawatt into revenue before demand catches up.

By DeepStack · September 19, 2026 · Power · 9 min read on the page · deepstack.ltd/stories/power-doesnt-depreciate/

THE DEEPSTACK CALL

Constructive Long access, not hardware

This is a power-access trade before it is a chip trade. Own the permit and the interconnect, not the loudest fleet.

Conviction High (4/5) · Version 2 · Oct 9, 2026

WHAT TO DO WITH THIS

1. Value AI sites on connected megawatts, never on contracted ones.
2. Pay for delivery speed: Bloom's 55-day timeline is where the premium lives.
3. Mark down GPUs parked behind late interconnections; they generate cost, not rent.

WHAT WOULD CHANGE OUR MIND

- The speed-to-power premium narrows while power stays scarce.
- Recontracting fails across older fleets, or a hyperscaler cancels because compute is sufficient.

THE FULL ARGUMENT

DeepStack's view is that the AI build-out is a power-access trade before it is a chip trade. The highest-value asset is a permitted, connected, reliable site that can turn a contracted megawatt into revenue; the Nebius spread, Bloom's 55-day timeline and the contrast between contracted and connected power all point there. The key reason is that a megawatt generates rent only when it arrives on schedule, while a GPU parked behind a late interconnection generates cost. We would change our mind if the premium narrows while scarce power persists, if CoreWeave-style recontracting fails across older fleets, or if a hyperscaler cancels because compute is sufficient. Until then, the winner is whoever controls permission and delivery, not whoever owns the loudest hardware fleet.

CALL HISTORY

Version	Date	Stance	Conviction	Reason	By
v2	Oct 9, 2026	Long access, not hardware	High (4/5)	Side named by the owner.	Marco Cauduro
v1	Sep 19, 2026	Long access, not hardware	High (4/5)	First call, as published with the story. The conviction, the actions and the flips were set down for the site on October 7, 2026.	DeepStack

Steve Eisman Sep 9, 2026

Data centers are proving more difficult and costly to build than expected, with gigawatt-scale projects running behind schedule, and every delay gives an already-unprofitable customer base more time to encounter financial strain.

realeismanplaybook.substack.com/p/inside-ais-fragile-ecosystem-with

THE STRONGEST CASE AGAINST THIS SIDE

CoreWeave Aug 11, 2026

Older generations of installed infrastructure retain substantial value because a large share of AI workloads do not require frontier silicon, so clusters rolling off their initial contract are recontracted rather than retired.

THE STRONGEST CASE AGAINST THIS SIDE

Michael Spencer Aug 26, 2026

Polling data shows roughly 70 to 75 percent of Americans oppose building large datacenters near their homes, and more than half support a national moratorium, with opposition rising since spring 2026.

Contradicts Edelbridge Alpha on evidence · www.ai-supremacy.com/p/the-ai-backlash-is-accelerating-datacenters-2026

NOT A DISAGREEMENT

Everyone agrees power binds

Physics (Romero): 90,000 racks in 2027 need about 23 GW. Permission (Edelbridge): 26 projects blocked in Q1 2026 against 31 in all of 2025. Execution (Nebius): 5 GW contracted, 0.8 to 1 GW connected this year.

WHERE THEY CROSS

The specific points where one voice meets another: the same evidence read two ways, or the same mechanism with a different sign.

THE DATED TESTS

What would settle it, on the Docket. A test is specified when an outsider can settle it without asking anyone: the question, the source, the rule and what happens if the source is late, revised or silent.

Dec 10, 2026 p06-t01 PENDING

ERCOT is due to verify its first large-load batch study; the cleared list shows whether Texas weeds out speculators or rations power.

Specification pending

December 2026 p06-t02 PENDING

Nebius must turn 800MW–1GW connected against 5GW contracted into Vineland revenue; commissioning and GPU fill test execution.

Specification pending

Next quarterly count p06-t03 PENDING

A second quarter near 26 blocked projects would turn a single data point into a permitting trend.

Specification pending

First cancellation p06-t04 PENDING

A hyperscaler cancelling for sufficient compute would turn the fiber analogy into evidence of overbuild.

Specification pending

Jan 1, 2029 p06-t05 PENDING

Bloom staying sold out while FuelCell Energy keeps signing would show scarcity has moved from the grid to factories.

Specification pending

THE TEST CAME IN

How DeepStack settles a question

Every Part of The Buildout asks one question and gathers the strongest case on each side from named investors and analysts, attributed, dated and linked. DeepStack then takes a side in The DeepStack Call, names what it would take to change its mind, and sets dated tests that an outsider can read on the day. When a test comes in, the result is published with its evidence, confirmed, refuted or inconclusive, and the Call’s history records when the house changed its mind and why. No person is scored or ranked. No accuracy rate is shown until ten results exist.

Quoted passages are short, attributed by name and linked to their source; the paraphrases are DeepStack’s. Quote this memo with attribution and a link to the canonical page.
