The Buildout · Part 07 · Memo

RATES

The Fed Hiked. The Long End Still Climbed.

The rate rise did not tame long yields. The bill for AI's capital binge is arriving through bonds, deficits and the investors now setting the price of duration.

By DeepStack · September 27, 2026 · Rates · 9 min read on the page · deepstack.ltd/stories/the-fed-hiked-the-long-end-kept-climbing/

THE DEEPSTACK CALL

Skeptical Supply sets the long end

The bond market is pricing the AI bill, not a recession. The Fed cannot hike its way to a lower 10-year.

Conviction High (4/5) · Version 2 · Oct 9, 2026

WHAT TO DO WITH THIS

1. Use a 10-year above 5% as the base case for valuing long-duration AI assets.
2. Track foreign demand, Japan first: buyers returning without a better hedge would break the supply story.
3. Circle the 2028 refinancing wave; that is when today's rates reach AI's borrowers.

WHAT WOULD CHANGE OUR MIND

- Long yields fall while nominal growth, inflation and AI capital spending stay firm.
- Japanese and other foreign buyers return in size without a better hedge.

THE FULL ARGUMENT

The DeepStack view is that the bond market is repricing the cost of the AI buildout, not forecasting its immediate collapse. The single most important reason is the financing mix: extraordinary capital spending and federal borrowing are leaning on markets even as the Fed's short rate reaches only the households and borrowers it can touch directly. Growth explains why the move is orderly; it does not make the eventual refinancing bill disappear. We would change our mind if long yields fell while nominal growth, inflation and AI capital spending stayed firm, or if Japanese and other foreign buyers returned in size without a better hedge. That would show demand and Fed control mattered more than supply.

CALL HISTORY

Version	Date	Stance	Conviction	Reason	By
v2	Oct 9, 2026	Supply sets the long end	High (4/5)	Side named by the owner.	Marco Cauduro
v1	Sep 27, 2026	Supply sets the long end	High (4/5)	First call, as published with the story. The conviction, the actions and the flips were set down for the site on October 7, 2026.	DeepStack

Growth: yields are catching up

Michael Howell Sep 18, 2026
The current bond market cycle is behaving like a normal cycle, and a major buying opportunity for fixed income is approaching as yields near a peak.
capitalwars.substack.com/p/its-the-economy-stupid

Michael Howell Sep 18, 2026
The risk-return balance for bonds is improving: a further 50bp yield rise would still give bonds a positive annual return, while a subsequent 100bp yield fall would generate a more than 12% annual return.
capitalwars.substack.com/p/its-the-economy-stupid

Matthew C. Klein Sep 14, 2026
Contrary to what many officials expected, inflation stopped decelerating in 2023, which is especially visible in underlying measures that exclude volatile and idiosyncratic components.
theovershoot.co/p/just-waiting-for-disinflation-is

Matthew C. Klein Sep 14, 2026
The 'supercore' version of the PCE price index was rising about 1 percentage point faster than in the years immediately preceding the pandemic even before the surprises of 2025-2026, and is now rising about 2 percentage points faster.
theovershoot.co/p/just-waiting-for-disinflation-is

Kris Sep 21, 2026
Interest rate hikes are not currently a problem for the economy or investing, because if the economy and company profits grow faster than the interest rate, value is created, and the estimated Q3 GDP growth of 5.1% plus inflation gives nominal...
www.potentialmultibaggers.com/p/the-end-of-an-era

Kris Sep 21, 2026
The main reason for higher inflation is probably the more expensive oil, and a higher interest rate will not cure that; the Fed just wants to ensure inflation doesn't get out of hand.

THE DATED TESTS

What would settle it, on the Docket. A test is specified when an outsider can settle it without asking anyone: the question, the source, the rule and what happens if the source is late, revised or silent.

Oct 28, 2026 p07-t01 PENDING

The Fed meets; another hike would support Klein's inflation reading, while no move would strengthen Paulson's case that September was a mistake.

Question	Does the Fed funds target, upper bound (FRED series DFEDTARU) read higher on its first observation after October 28, 2026 than on its last observation before it?
Source	FRED, Fed funds target, upper bound (DFEDTARU) `fred.stlouisfed.org/series/DFEDTARU`
Rule	value after date > value before date => hike
If the source is late, revised or silent	FRED dates a change at its effective date, so the first observation after the date is the reading; a reading not in yet waits for the next run. A series that is late, revised or silent is inconclusive, reviewed by the owner.

Oct 15, 2026 p07-t02 PENDING

Treasury publishes August foreign holdings; renewed Japanese buying despite poor hedged returns would undercut the missing-buyer thesis behind the long-end selloff.

Question	Did Japan's holdings of U.S. Treasury securities at the end of August 2026, in the Treasury International Capital table of major foreign holders published in mid-October, read higher than at the end of July 2026?
Source	U.S. Treasury, TIC Table 5: Major Foreign Holders of Treasury Securities (monthly text table) `ticdata.treasury.gov/resource-center/data-chart-center/tic/Documents/slt_table5.txt`
Rule	Compare Japan's August 2026 line with its July 2026 line in the same table. The answer is yes if the August figure is higher; no if it is equal or lower.
If the source is late, revised or silent	A table published after November 30, 2026, or a July figure revised in the same table so that the comparison changes sign, is inconclusive, and the Result says what was read and what was missing.

10-year at 5.5% p07-t03 PENDING

Howell expects a major bond opportunity; failure to turn would keep the growth brake unproven.

Specification pending

Jan 3, 2028 p07-t04 PENDING

Leveraged-loan and corporate maturities arrive; stress would show today's rates are reaching AI's borrowers.

Specification pending

How DeepStack settles a question

Every Part of The Buildout asks one question and gathers the strongest case on each side from named investors and analysts, attributed, dated and linked. DeepStack then takes a side in The DeepStack Call, names what it would take to change its mind, and sets dated tests that an outsider can read on the day. When a test comes in, the result is published with its evidence, confirmed, refuted or inconclusive, and the Call's history records when the house changed its mind and why. No person is scored or ranked. No accuracy rate is shown until ten results exist.

Quoted passages are short, attributed by name and linked to their source; the paraphrases are DeepStack's. Quote this memo with attribution and a link to the canonical page.
