DEEPSTACK The Buildout · Part 12 · Memo

MARKETS

The Model Is Not the Price

A frontier model now lists at $4 per million input tokens, open and Chinese models carry most of the tokens on the platforms that count them, and the two labs' revenue is counted in the tens of billions. Investors agree the token is cheap. They differ on what the lab is paid for, and only a prospectus on EDGAR can settle it.

By DeepStack · October 9, 2026 · Markets · 10 min read on the page · deepstack.ltd/stories/the-model-is-not-the-price/

THE DEEPSTACK CALL

Split The price has left the model

A frontier model no longer commands a price per token for long. The lab still does, and only a prospectus says what that price is worth.

Conviction Moderate (3/5) · Version 2 · Oct 10, 2026

WHAT TO DO WITH THIS

1. Separate token volume from token dollars: OpenRouter's 57% to 67% and Vercel's 62% in September are volume; the dollar share is uncounted.
2. Date every run-rate before comparing two: Longriver's May, Romero's July and Kim's October 2 figures are not updates of one another.
3. Read the customer note before the growth rate when the prospectus lands: Silverio's quarter from two customers is the line to clear first.

WHAT WOULD CHANGE OUR MIND

- A prospectus with audited revenue near the relayed run-rates, no customer above a tenth of sales and no investor-linked revenue to disclose.
- Alphabet sizes the TPU contracts with Anthropic inside them on October 28 and Cloud growth holds without them, retiring Burry's charge.
- No registration on EDGAR by October 31 while either lab cuts list prices again; the house moves toward the open-weights reading.

THE FULL ARGUMENT

DeepStack's view is that the price has left the model. The gap to open weights is about four months by Slok's July 16 reading of Epoch, a majority of tokens on the two platforms that count them had moved to open or Chinese models by September, and Anthropic's list price undercut OpenAI's by 60% on September 27. What still commands a price is the lab. Ren measured it in the completed job, George located it in distribution, and Erkan counts it in the dollars that have not followed the volume. The single most important reason for caution is that no audited figure for that price is on EDGAR. Longriver's $50 billion in May, Romero's $65 billion in July and Kim's $70 billion for OpenAI on October 2 are three readings on three dates, and only the registration statement the Docket tests for by October 31 puts them on one line. DeepStack expects the filing to show a lab that is paid, in part by its investors: the first reading on the revenue, the third on what it is worth. The view changes if a prospectus shows audited revenue near the relayed run-rates with no customer above a tenth of sales and no investor-linked revenue large enough to

disclose, or if Alphabet sizes the TPU contracts on October 28 and Cloud growth holds without them. The first answer arrives October 28.

THE DATED TESTS

What would settle it, on the Docket. A test is specified when an outsider can settle it without asking anyone: the question, the source, the rule and what happens if the source is late, revised or silent.

Oct 28, 2026 p12-t01 PENDING

Alphabet, Microsoft and Meta report, and the Fed decides the same day: whether the TPU system sales inside Google Cloud's backlog get a size, and whether Cloud growth holds near the second quarter's 82% without them.

Question	Did Alphabet, in its third-quarter 2026 results of October 28, 2026 (the earnings release, the 10-Q or the call), state a size for the TPU system sales contracts inside Google Cloud's backlog?
Source	Alphabet Q3 2026 earnings release, call transcript and Form 10-Q (SEC EDGAR, CIK 1652044) `www.sec.gov/cgi-bin/browse-edgar?action=getcompany&CIK=0001652044&type=10-Q`
Rule	The answer is yes if the release, the 10-Q or the call transcript gives a dollar amount, or a share of the Cloud backlog, for TPU system sales contracts or for the Anthropic contracts; no if the quarter is reported with no such figure. Google Cloud's growth rate is read alongside (the Part watches whether it holds near the second quarter's 82% without those contracts) but does not decide the test.
If the source is late, revised or silent	A size given only as a range wider than two to one, or given for a period other than the backlog at quarter end, is inconclusive, and the Result says what was read and what was missing. A report delayed past November 15, 2026 is inconclusive.

Oct 29, 2026 p12-t02 PENDING

Amazon reports: it does not break Anthropic out, so the test is what AWS discloses about its largest customers, against Silverio's October 5 count of 47% of Anthropic's sales through Amazon and Google.

Question	Did Amazon, in its third-quarter 2026 results of October 29, 2026 (the earnings release, the 10-Q or the call), disclose a customer or a group of customers at 10% or more of AWS revenue, or quantify Anthropic's share of AWS sales?
Source	Amazon Q3 2026 earnings release, call transcript and Form 10-Q (SEC EDGAR, CIK 1018724) `www.sec.gov/cgi-bin/browse-edgar?action=getcompany&CIK=0001018724&type=10-Q`
Rule	The answer is yes if the concentration note of the 10-Q, the release or the call names a customer or a group of customers at 10% or more of AWS revenue, or states Anthropic's share of AWS sales; no if the quarter is reported with no such disclosure. The figure is read against Silverio's October 5 count of 47% of Anthropic's sales running through Amazon and Google.
If the source is late, revised or silent	A concentration disclosure given only for Amazon as a whole, without an AWS figure, is inconclusive, and the Result says what was read and what was missing. A report delayed past November 15, 2026 is inconclusive.

Oct 31, 2026 p12-t03 PENDING

Anthropic's listing, Part 10's test as the Docket states it: a registration statement with audited revenue, net loss and customer concentration public on EDGAR, or shares trading; a confidential draft without an EDGAR filing is inconclusive.

Question	Did Anthropic file a registration statement (Form S-1 or equivalent) with audited financial statements on SEC EDGAR, or begin trading, by October 31, 2026?
Source	SEC EDGAR, Anthropic filings `www.sec.gov/cgi-bin/browse-edgar?action=getcompany&company=anthropic&type=S-1`
Rule	The answer is yes if a registration statement for Anthropic carrying audited revenue, net loss and customer-concentration disclosures is public on EDGAR by October 31, 2026, or its shares begin trading by that date; no otherwise. The audited figures against the $400 billion run-rate line Romero named for the end of 2027, and the two-customer share Silverio cited, are DeepStack's reading into the Result.
If the source is late, revised or silent	A confidential draft filing reported in the press but not public on EDGAR, or a filing without audited statements, is inconclusive, and the Result says what was read and what was missing.

Nov 18, 2026 p12-t04 PENDING

Nvidia reports: whether it names the labs among its largest customers, against Eisman's September 21 count of roughly 70% of the hyperscalers' AI revenue from the two.

Question	Did Nvidia, in its third-quarter fiscal 2027 results of November 18, 2026 (the earnings release, the 10-Q or the call), name OpenAI or Anthropic as a customer at 10% or more of revenue, or state the two labs' share of its revenue?
Source	Nvidia Q3 FY2027 earnings release, call transcript and Form 10-Q (SEC EDGAR, CIK 1045810) `www.sec.gov/cgi-bin/browse-edgar?action=getcompany&CIK=0001045810&type=10-Q`
Rule	The answer is yes if the concentration note of the 10-Q, the release or the call names either lab as a direct or indirect customer at 10% or more of revenue, or states a share of revenue for the two labs together; no if the customers at 10% or more are described without naming either lab and no share for the labs is given. The figure is read against Eisman's September 21 count of roughly 70% of the hyperscalers' AI revenue coming from the two labs.
If the source is late, revised or silent	A disclosure that names a lab only as an indirect end customer without a share is inconclusive, and the Result says what was read and what was missing. A report delayed past December 15, 2026 is inconclusive.

When it files `p12-t05` PENDING

The prospectus: whether the gross margin clears half of revenue, and revenue tied to investors against Distillate's July 15 count of $180 billion committed and $1.1 trillion pledged back.

Question	Does the first registration statement Anthropic makes public on SEC EDGAR (Form S-1) show a gross margin of 50% or more for the latest period in its statement of operations?
Source	SEC EDGAR, Anthropic filings (Form S-1 and its amendments) `www.sec.gov/cgi-bin/browse-edgar?action=getcompany&company=anthropic&type=S-1`
Rule	Gross margin is revenue less cost of revenue, divided by revenue, from the lines of the statement of operations in the first Form S-1 Anthropic makes public, for the latest period it presents (a 2026 year-to-date period when the filing carries one, else the latest fiscal year). The answer is yes if it is 50.0% or more; no if it is below 50.0%. A margin the filing gives for inference alone, or before payments to cloud partners, is read alongside and does not decide the test; later amendments do not reopen it.
If the source is late, revised or silent	If no registration statement for Anthropic is public on EDGAR by March 31, 2027, the test is inconclusive: the Result names the EDGAR search read that day and the missing filing, and the question moves to the first registration statement or annual report Anthropic files, read by June 30, 2027. If the statement of operations carries no cost of revenue line, the gross margin the filing states for the same period decides; if it states none, the test is inconclusive, and the Result says what was read and what was missing.

When it files `p12-t06` PENDING

The prospectus's customer note: whether the customers at a tenth of sales or more add up to a fifth of revenue, against Silverio's October 5 count of a quarter from two customers.

Question	Does the first registration statement Anthropic makes public on SEC EDGAR (Form S-1) report customers at 10% or more of revenue that together account for 20% or more of revenue in the latest fiscal year it presents?
Source	SEC EDGAR, Anthropic filings (Form S-1 and its amendments) `www.sec.gov/cgi-bin/browse-edgar?action=getcompany&company=anthropic&type=S-1`
Rule	Add the shares of revenue the filing gives, in its notes or its risk factors, for each customer at 10% or more of revenue in the latest fiscal year presented. The answer is yes if the sum is 20.0% or more; no if it is below 20.0%, including when the filing states that no customer reached 10% of revenue. A cloud provider that resells the models counts as a customer when the filing counts it as one; later amendments do not reopen the test.
If the source is late, revised or silent	If no registration statement for Anthropic is public on EDGAR by March 31, 2027, the test is inconclusive: the Result names the EDGAR search read that day and the missing filing, and the question moves to the first registration statement or annual report Anthropic files, read by June 30, 2027. A filing that names customers at 10% or more without their shares is inconclusive, and the Result says what was read and what was missing.

How DeepStack settles a question

Every Part of The Buildout asks one question and gathers the strongest case on each side from named investors and analysts, attributed, dated and linked. DeepStack then takes a side in The DeepStack Call, names what it would take to change its mind, and sets dated tests that an outsider can read on the day. When a test comes in, the result is published with its evidence, confirmed, refuted or inconclusive, and the Call's history records when the house changed its mind and why. No person is scored or ranked. No accuracy rate is shown until ten results exist.

Quoted passages are short, attributed by name and linked to their source; the paraphrases are DeepStack's. Quote this memo with attribution and a link to the canonical page.
